PETE&C Wireless Information

The network infrastructure is specifically designed for the Hershey Lodge and installed with specific equipment to handle a high volume of guest activity. The wireless access points are installed and configured to coordinate their activity and cooperate with each other. The introduction of customer supplied switches, routers and wireless access points (including MiFi devices) into this specifically designed system creates interference and causes performance deterioration and possible failure of both the in house and customer supplied equipment.

In order to remove the need for exhibitors to use their own network equipment, PETE&C is providing Wi-Fi at 2 Mb/s per device on an unlimited number of devices throughout the exhibit space.

To ensure the success of everyone's event, outside switches, routers and wireless access points (including Mi-Fi devices) must be approved in advance by PSAV in order to ensure they will work without causing problems.

Please also note that customer supplied switches, routers and wireless access points are the responsibility of the customer to troubleshoot and PSAV does not maintain spares of consumer grade equipment. Exhibitors requiring additional bandwidth or wired Internet services should contact PSAV directly.
